Thu, 17 May 2018 00:21:00 GMT - A rock with majorly dark minerals form mafic rocks but with more fractionation during magma cooling lighter coloured mineral are able to form based on Bowens series. Based on this colour difference the rocks can be either mafic or felsic in Figure 2 below shows that as you move from right to left you have more ultra-mafic due to fractionation.

Sat, 19 May 2018 02:27:00 GMT - a rock, such as grain size, shape, and arrangement. Igneous rocks that crystallize slowly beneath the Earth's surface, typically have visible individual minerals. Extrusive igneous rocks tend to cool much more rapidly, and the minerals grow quicker and can not get as large. They thus have a sugary or fine grained texture.

### **Igneous Rocks - SOEST -**

Wed, 16 May 2018 18:23:00 GMT - rocks are layered, and layering can be present in other rocks as well. Water does not need to be present to weather rocks, but many sedimentary rocks form in water environments.

Sedimentary rocks can also form from sand dunes, in rivers, and on the ocean floor. A good place to find a lot of sedimentary rocks is in the Grand Canyon. 3. Metamorphic Rocks.
